Road to Certification of Regulated Fire Safety Products

Fire safety products under Singapore Test Lab's Fire Safety Product Scheme (FSPS) are regulated by the Singapore Civil Defence Force (SCDF).

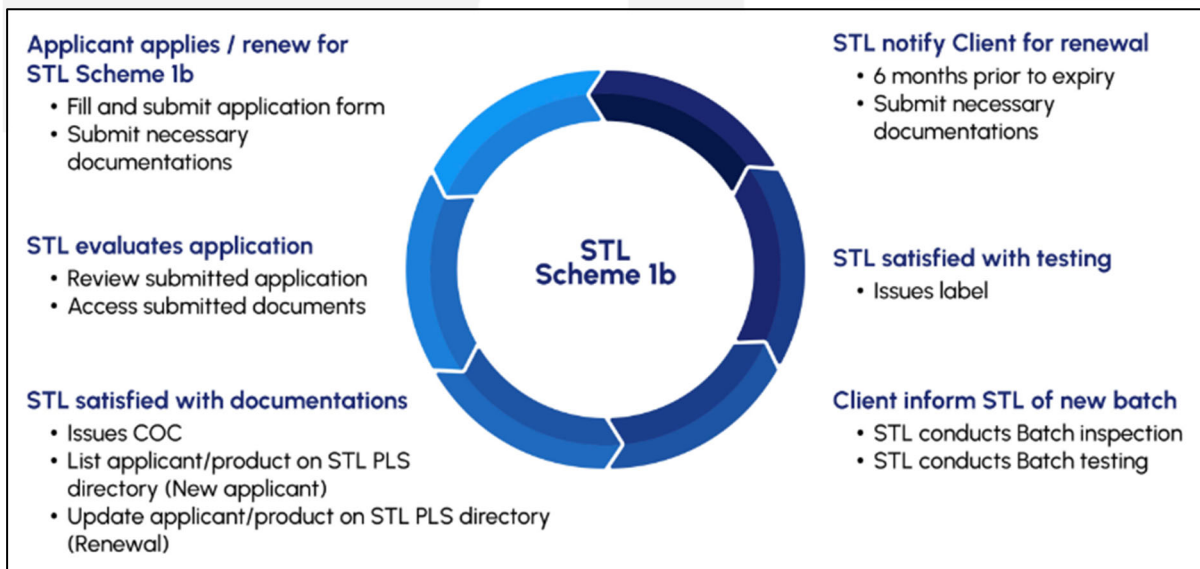

Chapter 11 of the Fire Code contains a wealth of information regarding fire safety product requirements, which might be enough to compel many to seek qualified assistance in testing and certifying these products.

One such professional in the field is Singapore Test Lab. Accredited by the Singapore Accreditation Council (SAC), we are one of the qualified laboratories in the niche industry accredited to carry out rigorous testing and certification of fire safety products in line with the Fire Code as a Conformity Assessment Body.

Our FSPS ensures that fire safety products conform in accordance with the stipulated regulations, thereby, ensuring high standards of safety, consistency, and quality.

Our testing and certification include the thorough compliance verification process, with surveillance requirements, issuing of the Certificate of Conformity (CoC) and listing in our Fire Safety Product Scheme for formal recognition by industry.

Applicant applies / renew for STL Scheme 1b
- Fill and submit application form
- Submit necessary documentations

STL evaluates application
- Review submitted application
- Access submitted documents

STL satisfied with documentations
- Issues COC
- List applicant/product on STL PLS directory (New applicant)
- Update applicant/product on STL PLS directory (Renewal)

STL Scheme 1b

STL notify Client for renewal
- 6 months prior to expiry
- Submit necessary documentations

STL satisfied with testing
- Issues label

Client inform STL of new batch
- STL conducts Batch inspection
- STL conducts Batch testing
